COMPARE

STABILITY

Finding the right putter profile can dramatically increase your consistency, distance, and accuracy. When it comes to putter shafts, the less torque the better, which is why Stability is ultra-stiff, with 1 degree of torque, so your putter face will remain square at impact for smooth consistent putts

Now you've got a choice to choose which Stability Shaft you want to putt with- Stability Carbon, Stability Tour, and the new Stability One Tour Spec.

Stability One Tour Spec

- Traditional one-piece composite construction
- Sleek, tour design with blackout looks
- Ultra-Stiff with 1 degree of torque
- Fits only L-neck, non-bend style putters
- Incredibly consistent & stable
- Softest feel

Stability One

- Patented 2-piece construction
- Sleek, tapered, tour design
- Blackout looks
- Fits any putter regardless of brand, model, bend profile
- Incredibly consistent & stable with 1 degree of torque
- Softer feel

Stability Carbon

- Patented 2-piece construction
- Customizable
- Carbon weave, non-taper shaft profile
- Fits any putter regardless of brand, model, bend profile
- Extremely stable and ultra-stiff
- Soft feel
